Simplex vises are available in one of the broadest, most complete quality lines available. A full range of sizes and types meets every requirement for service without compromise of materials or workmanship. Extra features have been added continually. Modern construction methods coupled with precise machining assure you that each vise component has extra strength. Every vise gives extra years of service with no premium in price. All vises meet rigid Federal Specifications.

Plus Vise Features

SIMPLEX SWIVEL BASE — Forged steel corrugated clamp bolt when tightened fits mating corrugations in base to assure positive locking. On 6" and 8" jaw width vises two clamp bolts are used.

SIMPLEX VISE NUT — Alloy steel nut is stronger, more wear resistant than ordinary malleable nuts. This is an important Simplex advantage.

SIMPLEX JAW FACES — Properly hardened tool steel jaw faces are firmly pinned to jaws, yet easily removable for replacement, by driving the pins downward through the vise jaw with a center punch. Top-entering pins eliminate screw heads and holes in jaw faces, giving 100% gripping surfaces.

SIMPLEX ONE-PIECE HANDLE — Non-pinching handles have ends formed from the handle itself. There are no separate ends to loosen. Finishing is smooth for comfortable, safe gripping.

Slides

Are Milled

From Solid Steel

Only Simplex vises have this important quality feature: slides are **solid** steel. In the industrial vise line: machinists, combination pipe, filers, and sheetmetal workers vises have slides milled from a solid steel bar.

After milling, the front jaw is integrally cast on the slide, making a rugged, thoroughly dependable unit. It costs more to make a vise this way, but it costs you no more initially, and far less in the long run.

When the bar is sawed to length it is milled to provide a groove for the main vise screw and nut. Holes are drilled and a heavy steel pin inserted, around which the jaw is cast. Precision milling of the slot provides smooth sliding surfaces and good fit. Simplex steel slides are unbreakable — proven so in the most severe industrial use.

Greater strength / Longer service / Best value

All steel slide—
unbendable,
unbreakable.

Vise body—Extra heavy
semi-steel, accurately
machined and broached.

New alloy steel nut
is stronger, longer
wearing than a malleable nut.

Full 360° swivel base with
positive mechanical lock.
Larger models have
twin locks.

Tool steel jaw inserts
are easily replaceable.
No screw holes or heads
on faces. Deep diamond serrations—
Smooth faces also available.

Non-pinch
handle is made from
one piece of steel.

Guarantee

Simplex Vises are guaranteed for the life of the
vise against defects in workmanship or material.

Simplex[®] Machinists Vise

stationary base type

For severest service this stationary type vise offers unsurpassed rigidity. Machined base has three bolt holes for firm, accurate bench top fit. Tool steel jaw faces, either smooth or serrated, can be replaced easily when desired. Faces have no screw heads or holes to reduce gripping power. Alloy steel nut gives years of reliable, trouble-free service. Non-pinching handle is made of solid steel with forged ends. With a Simplex stationary base vise your investment is protected: you can convert it to a swivel base model with a kit as shown below.

vise no.		jaw width	jaw opening	weight lbs.

Simplex[®] Machinists Vise

swivel base type

Maximum convenience and utmost strength are combined in Simplex swivel base vises. Full 360° rotation is provided with locking in any position when forged steel clamp bolt is tightened. Bolt meshes with teeth in base casting for mechanical rather than friction lock. On Models 61-SN and 81-SN two clamp bolts are used for extra strength. Long wearing tool steel jaws are easily replaceable. Alloy steel nut will last for years even with extreme use. If desired, swivel base models may be converted to stationary base types by removal of the swivel base assembly.

43-SJN	43-SJ	4½"	7"	72

Machinists

swivel jaw & base

The most versatile vise for tool room use, this model is especially convenient for gripping tapered or irregularly shaped work pieces. Removal of the tapered locking pin permits the rear jaw to swivel for holding non-parallel and otherwise hard-to-hold pieces. With tapered pin in place the vise becomes a standard swivel base model with all of the outstanding features that have made Simplex vises the best quality value. Made in three popular sizes for every tool room requirement.

Combination

bench & pipe type

The exclusive Simplex steel slide is a doubly important feature of this vise because the jaw is deeper and extra strain is usually imposed on the vise in service. The slide is unbreakable, unbendable. Tool steel pipe jaws are accurately milled and carefully hardened to grip securely pipe or round sections as small as ⅛" diameter. Pipe jaws do not project beyond the jaw faces. In oil field and marine applications the Simplex combination vise offers best value where both machinists and pipe vises are required.

vise no.		jaw width	holds pipe	weight lbs.	opens	jaw depth

61-CPN	61-CP	6"	⅛" to 6"	165	10"	7"

Sheet Metal workers vise

Greater jaw depth and slide length enable this vise to grip extra wide and deep work. The jaws have smooth, hardened steel inserts 2" deep with a total jaw depth of 6½". These large, smooth jaws grip sheet metal or wood securely without marring. Useful where maximum capacity is required. Handle won't pinch fingers.

Filers Vise swivel base type

High arched jaws permit easy access to work from all sides in filing and other production operations. Hardened steel jaws have deep diamond serrations for secure gripping, unless smooth jaws are specified. The rugged steel slide and other quality features make the Simplex filers vise a long-lived investment.

For A Complete Listing of Pipe Vises

Simplex®

Drill Press & Milling Machine Vises

heavy duty type

These are best for rugged milling and drilling. As an exclusive feature, hardened steel plates cover the work surface to prevent holes from being drilled in the body. Four extra heavy flanges are provided for fastening vise to table. Two slots are milled in the bottom of the base for key-way alignment. Main screw operates in easily replaceable bushing. Straight or offset type hardened steel jaw faces are available and easily replaceable. Overall length is 17". Overall height 4 $\frac{3}{8}$ ". Regular semi-steel or solid steel models.

vise no.	jaw width	jaw opening	jaw depth	weight lbs.
Cast semi-steel 6-DP	6"	6"	2 $\frac{1}{2}$ "	55
Solid steel 6-DPS	6"	6"	2 $\frac{1}{2}$ "	56

medium duty type

Long service for milling and drilling is featured in this low price model. Four flanges provided for fastening vise to table. Two slots milled in bottom for key-way alignment. Main screw bushing is replaceable. Movable jaw has "V" slot for holding round pieces. Height 2 $\frac{1}{4}$ ".

light duty type

For light industrial and home shop use, this drill press vise opens 3", has jaws 3" wide. Features both vertical and horizontal "V" slots in movable jaw for holding round workpieces.

vise no.	jaw width	jaw opening	jaw depth	weight lbs.
3 $\frac{1}{2}$ DP	3 $\frac{1}{2}$ "	4 $\frac{1}{2}$ "	1 $\frac{3}{4}$ "	17
3 DP	3"	3"	1 $\frac{1}{2}$ "	6

Simplex® Utility Vises

Simplex utility vises are the best low-price vise line made. They combine the advantages of a swivel base, pipe vise and anvil in one unit, and they feature the great strength of a steel channel slide. Highest quality materials and workmanship are used; low price is a result of efficient mass production.

Five sizes are offered: No. 300 is ideal for model making and home use, No. 350 is best for light-duty home use, Nos. 400 and 500 are ideal for medium duty garage, farm, shop and home use.

All sizes are ruggedly constructed with strong castings, hardened steel jaws and unbreakable steel slide. Finish is attractive high-gloss red enamel.

Compare the seven outstanding features of Simplex utility vises. Point for point they evidence the greatest value in the low price vise field.

- 1** Steel channel slide has extra width and depth to give greater strength than small bar slides. No more bent slide or damaged screw.
- 2** Square thread steel screw is protected by slide from dirt, chips, and blows, insuring long service.
- 3** Hardened steel jaw inserts are removable. All sizes have hardened steel serrated jaws for maximum grip.
- 4** Anvil with horn is useful for dozens of jobs including—bending rings, hoops, etc.
- 5** Nos. 350, 400 and 500 have hardened steel replaceable pipe jaws. Other sizes have integrally cast pipe jaws.
- 6** Swivel base provides maximum convenience in use. Lock bolt clamps vise securely, positively.
- 7** Nos. 350, 400 and 500 have replaceable malleable iron nuts.

vise no.	jaw width	jaw opening	weight lbs.
30*	3"	3¼"	11
300	3"	3¼"	12
350	3½"	4½"	19
400	4"	5"	25
500	5"	5"	30

*No. 30 Vise does not have swivel base.

Simplex® Woodworkers Vise

quick acting or continuous screw type

This heavy duty woodworking vise has accurately ground jaw faces, tops and sides. For ruggedness and mounting ease, bolt holes are slotted. Steel guide rods are $\frac{7}{8}$ " diameter with extra strong tie bar for perfect alignment, smooth operation of movable jaw. Select hardwood handle has large easy-grip knobs. For firm gripping of thin materials, front jaw is inclined from the vertical. Options include choice of quick acting or continuous screw, with adjustable steel dog. Slotted mounting brackets for easy mounting. No exposed guide rod nuts.

type	vise no.	jaw size	jaw opening	weight lbs.
quick acting type with dog in front jaw	W-7	4" x 7"	9"	30
	W-10	4" x 10"	12"	33
continuous screw with dog in front jaw	W-7-CD	4" x 7"	9"	28
	W-10-CD	4" x 10"	12"	35

Tubular steel handles are furnished at extra cost if specified. To specify, add "T" after the vise number in the table at the left.

adjustable steel handle type

W-6-C	3" x 6"	7"	10½

Simplex®

Sidewinder Vise extra capacity on left side

Sidewinder provides the economy of a 7" woodworkers vise with the holding capacity of a 10" vise. It provides 250% more clamping area on the left side where it is needed most. This brand new 7" vise has the guide rods and screw on the right side to give you 2½" of clearance on the left. An outstanding advantage is economy with compactness. Dog is standard. Choice of wood or steel handle. Tubular steel handle has nylon bumpers. Other important features include graphite bronze thrust bearing that never needs grease, slotted bolt holes for easy mounting. Choice of quick acting or continuous screw.

NOTES — Where letter "T" is shown, Simplex woodworkers vises have tubular steel handles instead of hardwood at extra cost. Use complete number to indicate handle preference.

Where letter "T" is shown, Columbian furnishes steel handles instead of hardwood handles.

Letter "W" indicates hardwood handles. On other models Wilton furnishes aluminum handles.

Simplex Vises

We are delighted to add this top quality line of Simplex Vises to our ever-growing group of **RIGID** Work-Saver Tools. All Vise production facilities will be moved to our Elyria plant. At that time, this famous old line of machinists and wood-working vises will assume their new name of **RIGID** Simplex Vises.

You have our complete assurance that there will be no sacrifice in material quality or workmanship. As with all **RIGID** tools, quality and use efficiency will be ever paramount. We will welcome your suggestions for design improvements or additions to the new **RIGID** Simplex Vise line that you feel would help you sell more . . . profit more with these vises.

The Ridge Tool Company • Elyria, Ohio • U.S.A.
